*Heat exacerbated death. The term “heat exacerbated death” means a natural cause death estimated by the department to have resulted from an existing health condition exacerbated by extreme, or near extreme, heat. Such estimation should be determined by the use of one or more statistical models by the department. Beginning with the report due pursuant to subdivision b no later than June 15, 2022, and continuing thereafter, at least one such model shall utilize sensitive statistical methods that assess daily temperature as a continuous variable in relation to daily mortality to estimate heat-exacerbated death, without the use of a qualifying temperature threshold.*

*Heat stress death. The term “heat stress death” means a death directly attributed to heat on a death certificate, or with an underlying or contributing cause of i) excessive natural heat or ii)*

*effects of heat and light, as such conditions are described in the International Classification of Diseases Version 10 coding system.*

- 3. a description of the relative heat vulnerability of each neighborhood tabulation area;*
- 4. a description of reported data;*
- 5. a description of social and environmental factors assessed by the department to determine heat vulnerability;*
- 6. a description of methods used to derive heat vulnerability and estimate heat exacerbated deaths; and*
- 7. aggregate demographic information of heat stress deaths, including, but not limited to, the age, gender, neighborhood tabulation area and the race or ethnicity of the decedents.*
